

The Stone of the Wise Ones

Two billion people use a mobile phone. But ever more, international studies warn of possible health damage. A mineral from North America is to protect the consumer now against the electrical magnet jets.

By Bettina M. Gordon

GEWINN: In this year alone nearly 990 million mobile telephones will be sold around the world. That is 21% more than in the previous year. At the same time experts as well as the Austrian Minister of Health warn of the fact that mobile phones can make us ill. What is the problem?

Dandurand: Mobile telephones, and also computers, televisions or cordless telephones produce electromagnetic fields. The human body is designed to live in a electromagnetic field. Even in nature, there are radio waves. The problem is that mobile telephones or computers and televisions send a multitude of waves, which the human body does not recognize and therefore resists. Cells harden, split themselves off, multiply, form Tumors and the like. Studies conducted on human DNA, clearly to proved that the regular use of a mobile phone affects the reproductive system and genetic make-up of humans. Our product is designed to neutralize these harmful waves and to stop their negative effect on humans. Therefore also the name, Aulterra Neutralizer.

GEWINN: I admit, I have the probably oldest telephone of North America and use it not very frequently, which turns out as luck for me. Because, in the course of conducting research for this interview, I saw numerous international studies and articles, which classify mobile phones as a health risk, particularly with children.

Dandurand: Yes, children under eight years should never use a mobile phone. There is a study of children between eight and 13 years, which was conducted at the same time in five different countries and which shows clearly, what happened in the brains of the children, when they use a mobile telephone. After only one minute on the mobile phone the brain waves of the children are total erratic, as with some mental disorders. And it took four hours after exposure until the brain waves were normal again. The head of a child is softer than that of adults and the rays can penetrate more deeply. As the father of four, I am particularly interested in protecting our children. Aulterra intends to start a world-wide initiative: Each school child with a mobile telephone will get a Neutralizer from us free of charge. We must still research and prepare the details for each country, but this is the vision so that the health of each school child with a mobile telephone will be protected.

GEWINN: Which electronic devices are most dangerous?

Dandurand: Mobile phone, because we hold them directly to our head, followed by Bluetooth, which works on a lower frequency, but as it is worn in the ear, we tend to

wear it much longer. Then they come the computers. It will be at least ten years until we will really know, how harmful the wireless Internet is for us humans.

GEWINN: What is the position the mobile phone manufacturer and network carrier concerning the health risk of its products?

Dandurand: In America there are at present ten class action suits against the mobile telephone industry, which will go before court. Those are complaints in the billions of dollars and they will receive worldwide publicity. In 1999, the British firm Lloyds of London, the largest insurance company in the world, refused to insure the mobile phone industry. Within 24 hours all other insurance companies rejected the mobile phone manufacturers as well. There are some who compare the complaints against the mobile phone industry to those, which were brought against the tobacco industry years ago. The American manufacturers became careful: Each new mobile phone comes with a warning, similar to cigarette packages, with warnings about the possible health damage. You will see that, if you exchange the oldest mobile phone in North America for a new one. We at Aulterra want to be part of the solution of the problem with our product. Our Neutralizer is so compact that it fits on or into the battery compartment of each mobile phone and makes a mobile telephone again safe, especially for children.

GEWINN: How exactly does the Neutralizer function?

Dandurand: The Neutralizer absorbs neither the radiation, nor blocks the electromagnetic fields, because that would impair the receipt of the mobile phone. In addition, because each product, which absorbs the radiation quickly becomes saturated it and would have to be frequently replaced. For me it was always particularly important to have a product on the market, that neutralizes the harmful rays but does not become saturated or need to be replaced. Furthermore, I wanted it to be measured with conventional scientific yardsticks. There are other enterprises, which have similar products on the market, that successfully protect against electromagnetic radiation, but these companies measure the efficacy of their products with aura photography, Kinesiology or with bio resonance machines. That was for me not enough for me. I turned to Quantum Biology Research Laboratories in New York, which tested the influence of the electromagnetic field on biological level with human DNA. As far as I know, we are the only company in the world that has conducted studies using conventional science to prove that the harmful rays of a mobile phone, a computer or a television are neutralized with the Neutralizer.

GEWINN: How does the mobile phone industry, which makes roughly 100 billion dollar annually, react to your comparatively very small enterprise? Are you taken seriously?

Dandurand: Yes, very much. After publishing the newest study of the efficiency of the Aulterra Neutralizer, many Fortune 500 enterprises approached us. With the computer manufacturer Sun Microsystems we are currently conducting research. While I cannot discuss the details, I can say that some of the largest enterprises in the world are showing interest our Neutralizer with the potential to integrate it into their own products. Each country has strict guidelines about electromagnetic fields, which must be met by the

electronics industry. Computer manufacturers often invest often hundreds of millions of dollars into the development of a new product, which cannot be brought to market unless these standards are met. The Neutralizer can help them to meet the national and international requirements. This allows the manufacturers to launch their products faster, while protecting consumers. It is truly a A-Win-Win-Win situation.

GEWINN: What is your next project?

Dandurand: A Neutralizer for the whole house, The Whole House Neutralizer. This product will neutralize the unhealthy electromagnetic fields and will make all of the electrical devices in your house safe. The first tests are very promising.

INSERT: Aulterra CEO Kim Dandurand seems to have found the stone of the wise ones in the truest sense of the word: The green Aulterra stone, which is found in the west of the United States, has the power according to Dandurand, to „neutralize” electromagnetic fields and thus render them harmless to the consumer. In a patented, technical procedure the rare green stone is finely pulverized, mixed with another ground mineral and bound with ink and a homeopathic compound. The result is the Aulterra „Neutralizer “- a circle with three centimeters in diameter and a millimeter in thickness, which has captured the interest of anxious mobile phone users who have already purchased more than 30,000 Neutralizers.

After the publication of the most recent study of the efficacy of the Aulterra Neutralizer, which is available on www.aulterra.com, numerous Fortune 500 enterprises have contacted Aulterra and were interested in learning more. Together with the computer manufacturer Sun Microsystems, Aulterra is currently engaged in experimental studies to its viability. Other manufacturers have also called and are exploring the potential to integrate the „Neutralizer “into their products before bringing them to market.

Aulterra - which means “golden earth” – has a golden future before itself. In the US the State of Idaho resident projects gross sales of three million dollars. By 2010, gross sales are expected to be between 150 and 250 million. The Aulterra Neutralizer (euro 29.80 for three pieces per packing) is available since 2006 in Austria and Germany at <http://www.natuerlich-quintessence.de>.

„Wir neutralisieren Handy-Strahlen.“

- **GEWINN:** 2007 sollen weltweit knapp 990 Millionen Mobiltelefone verkauft werden. Gleichzeitig herrscht ein Krieg der Studien, die zum einen vor krankmachenden Handy-Strahlen warnen bzw. Entwarnung geben. Sie sind Anhänger der ersten Kategorie.

Dandurand: Das Problem ist, dass Mobiltelefone oder Computer und Fernseher eine Vielzahl von Wellen aussenden, die der menschliche Körper nicht kennt und sich daher dagegen wehrt. Zellen verhärten sich, spalten sich ab, multiplizieren sich, formen Tumore etc. Es gibt Studien, die an menschlicher DNA, am Erbgut, durchgeführt wurden und klar beweisen, dass der regelmäßige Gebrauch eines Handys das Erbgut eines Menschen beeinflusst.

Dandurand: Für mich war es immer besonders wichtig, ein Produkt auf den Markt zu bringen, das die Strahlen neutralisiert, den Empfang nicht beeinträchtigt, niemals ausgewechselt werden muss und mit konventionellen wissenschaftlichen Maßstäben gemessen werden kann. Ich habe mich an die Quantum Biology Research Laboratories in

Sind Handys gefährlich? Auf jeden Fall verdient man an so kleinen Kreisen, die die „Handy-Strahlung“ neutralisieren sollen, anscheinend recht gut

PHOTO: AULTEERRA

weisen, dass die schädlichen Strahlen eines Handys, Computers oder Fernsehers mit dem Neutralizer ausgeschaltet werden.

GEWINN: Was kann der Neutralizer?

Dandurand: In einem patentierten, technischen Verfahren wird Stein gemahlen, mit einem weiteren Mineral gemischt und mit Tinte und einer homöopathischen Lösung gebunden. Das Ergebnis ist ein selbstklebender Kreis mit drei Zentimeter Durchmesser und einem Millimeter Dicke.

GEWINN: Wie viele dieser Kreise haben Sie schon verkauft?

Dandurand: 30.000. Unseren Aulterra Neutralizer gibt es seit 2006 übrigens auch in Österreich, kostet 29,80 Euro für drei Stück pro Packung.

GEWINN: Was ist die Position der Handy-Hersteller und Netzbetreiber bezüglich des gesundheitlichen Risikos ihrer Produkte?

Dandurand: In Amerika gibt es derzeit zehn Sammelklagen gegen die Mobiltelefonindustrie, die vor Gericht gehen werden. Das sind Klagen in Milliardenhöhe und es wird viel Publicity geben. Die britische Versicherung Lloyds of London hat schon im Jahr 1999 abgelehnt, die Handy-Industrie zu versichern und innerhalb von 24 Stunden haben alle großen Versicherungen der Welt nachgezogen und jeden Versicherungsschutz abgelehnt. Es gibt Stimmen, die die potenziell auf die Handy-Industrie zukommenden Klagen auf Gesundheitsschädigung mit jenen Klagen vergleichen, die gegen die Tabakindustrie eingebracht wurden. Die amerikanischen Hersteller sind vorsichtig geworden: Jedes neue Handy kommt mit einer Warnung, ähnlich wie auf Zigarettenpackungen, die auf mögliche Schäden hinweist.

GEWINN: Wie reagiert die Handy-Industrie, die knapp 100 Milliarden Dollar Umsatz macht, auf Ihr im Vergleich sehr kleines Unternehmen? Werden Sie überhaupt wahrgenommen?

Dandurand: Ja, sogar sehr. Mit dem Computerhersteller Sun Microsystems führen wir zurzeit Experimente durch. Und einige der größten Unternehmen der Welt zeigen Interesse, unseren Neutralizer in ihre eigenen Produkte zu integrieren. Aber darüber kann ich noch nichts Genaueres sagen. ©

Exklusiv-Interview mit

Kim Dandurand, CEO von Aulterra und Handy-Strahlenblocker

DAS INTERVIEW FÜHRTE BETTINA M. GORDON

PHOTO: MICHAEL GRUBER

GEWINN: Sie werben damit, dass Ihr Produkt – Aulterra Neutralizer – diese schädlichen Wellen neutralisiert und den negativen Effekt auf den Menschen stoppt.

Dandurand: Korrekt.

GEWINN: Und wie?

New York gewandt, die den Einfluss des elektromagnetischen Feldes auf biologischer Ebene mit menschlicher DNA getestet haben. Meines Wissens sind wir die Einzigen, die auf weltweit anerkannte, konventionelle Science in ihren Studien verweisen können, die be-
